Carna Medical Technology stands as a global pioneer in beauty and medical innovation, powered by a strong engineering foundation and an unwavering commitment to excellence. Based in the Netherlands, our company proudly delivers advanced, high-technology devices that are trusted and used in more than 45 countries worldwide – a testament to our global influence and reliability.

At Carna Medical, continuous innovation is at the core of our vision. We integrate the latest technological advancements into every product we create, ensuring exceptional performance across both aesthetic and medical applications. Renowned for their precision, safety, and effectiveness, our devices are highly valued by professionals, clinics, and end-users around the world.

As a leading Dutch manufacturer of beauty technologies, we contribute significant value to the global economy through our advanced hair-removal systems, skin, nail and hair treatment technologies, ultrasound platforms, radio-frequency systems, body contouring systems, and fat-reduction devices. Our expanding research and development efforts further strengthen our presence in a rapidly evolving global market.

Carna Medical's commitment to excellence has been internationally recognized: Market Inside Group, the largest research organization in the United States, named Carna Medical among the Top 10 Beauty Device Manufacturers Worldwide for the years 2022–2030 – a prestigious acknowledgment of our global leadership.

Moreover, Carna devices are proudly chosen in some of the most prestigious locations across different continents – from the luxury resort spas of the Maldives to the royal palaces of Gulf countries. This widespread trust reflects the unparalleled quality and sophistication of our technologies, solidifying Carna Medical as a preferred global brand in the world's most distinguished environments.

Future's Skin Care Technology

TRINITY

Microfrequency & Ozone Technology

Introducing a true original innovation by Carna Medical Technology – the Trinity–Hyper Skin Booster, a next-generation system designed to redefine aesthetic treatments at their core.

As the first device in Europe to combine advanced micro–frequency and ozone technology, Trinity is engineered to work where real transformation begins: within the three fundamental layers beneath the skin. This is not a conventional treatment approach – it is a longevity-driven solution that targets the biology of aging itself.

Trinity's unique mechanism stimulates and restores fibroblast activity, reactivating the skin's natural ability to produce collagen and regenerate from within. By optimizing cellular function at a deep level, it helps return the skin to a healthier, stronger, and visibly younger state – up to 10 years rejuvenated.

The synergy of:

- Micro–frequency technology, activating cellular energy and communication
- Ozone technology, enhancing oxygenation, purification, and deep tissue repair

creates a powerful regenerative environment that addresses 30+ skin, hair, and nail concerns with outstanding efficiency.

Clients experience:

- Visible results from the very first session
- Completely pain-free and non-invasive treatments
- No downtime – immediate return to daily life

Trinity–Hyper Skin Booster is more than a device – it is a new category of aesthetic technology, built on innovation, originality, and scientific excellence.

Reprogram the skin. Restore its youth. Redefine longevity.

Trinity Hyper Tip

Unlock a new standard in advanced skin rejuvenation with the Trinity Hyper Tip – a highly versatile, precision-engineered technology developed to elevate both aesthetic and therapeutic outcomes.

Designed to address multiple skin concerns with exceptional accuracy, the Trinity Hyper Tip supports advanced anti-aging protocols, enhances the skin's natural regenerative processes, and improves overall texture for a smoother, firmer, and more radiant appearance.

Powered by Carna's innovative micro–frequency and ozone technology, this system works in harmony with the skin's biology to deliver targeted, high-performance results at a deeper level. All treatments are performed through a gentle, non-invasive approach, ensuring maximum comfort, zero downtime, and consistently visible improvements.

Step into the future of aesthetic and dermatological innovation with the Trinity Hyper Skin Booster – where precision technology meets transformative care.
